ADR-005: Version-Controlled Experiment Schema

Status

Approved

Context

The simulator schema will evolve as new genes, drives, or environmental layers are introduced.

Decision

Enforce schema version metadata fields (`\texttt{schema\_version}`, `\texttt{engine\_version}`, `\texttt{export\_version}`) in the root of `\texttt{config.json}` and `\texttt{summary.json}`.

Consequences

The portal can dynamically inspect the `\texttt{schema\_version}` of uploaded ZIPs and render legacy runs correctly using conditional data parsers.
