

Why Genesis?

Project Genesis Research Repository

Generated: July 2026

Why Genesis?

Genesis exists to study the emergence of artificial civilizations through reproducible computational experiments. It is an attempt to bridge the gap between complex systems simulation and narrative human history.

1. The Core Philosophy

Why Simulation?

Computational simulation is the only laboratory we have to study macro-sociological and evolutionary outcomes that are otherwise impossible to observe in real-time. By simulating agents with cognitive planners, we can observe the emergent friction, cooperation, and collapses that shape complex societies.

Why Narrative?

Data without narrative is noise. If we only expose raw CSV logs and charts, we lose the history. Genesis treats simulations as `\textit{histories}` first using the `\textbf{Chronicle}` Engine to translate numerical events into stories (births, disputes, expansions, declines, collapses). Narrative helps us understand the `\textit{meaning}` of the simulation before we analyze the `\textit{mechanisms}`.

Why Reproducibility?

Science requires verification. In computational research, this means every published run must be fully reproducible. Genesis treats the `\textbf{Experiment}` Package as a first-class, immutable research artifact containing configs, event streams, and raw datasets, enabling anyone to reload, inspect, and verify the experiment locally.

2. Immutable Truths (What Should Never Change)

1. `\textbf{Decoupled}` Architecture: The portal displays and verifies; the simulation engine computes. They interact solely through defined, versioned schemas.
2. `\textbf{Story Before Charts}`: Narrative records rule the Civilization Record. The Observatory (Evidence Explorer) is a secondary research instrument panel.
3. `\textbf{Reproducibility Over Aesthetics}`: Premium design is critical for discovery, but data accuracy and citation governance are absolute.
4. `\textbf{Emergent Chronicles}`: The history of a civilization must emerge organically from events, never scripted or forced.
